## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/27/2010 has been entered.

2. This Office Action is in response to the Amendment filed on 9/27/2010. Claims 1-15 and 18 are now pending.

### ***Examiner's Amendment***

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Shahrokh Falati on 12/15/2010.

4. The application has been amended as follows:

Claim 12, change "a organosilane" to -- an organosilane --,

Claims 19-42, cancel claims 19-42.

***Double Patenting***

5. In view of the amendment, the double patenting rejection has been withdrawn.

***Allowable Subject Matter***

6. Claims 1-15 and 18 are allowed.

7. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest reference: Yu et al. (CN 1188779).

Yu et al. disclose an electrically conducting high-molecular composite material with positive temp coefficient (PTC) which is prepared from high-molecular crystallizing basic material or the mixture of high-molecular crystallizing basic material and another high-molecular material, 5-40 wt% of modified conducting filler and other assistants through proportioning, mixing, granulating /crushing, shaping, cross-linking and heat treatment, wherein said modified conducting filler serves to regulate the interface force between filler and basic material to disperse the filler non-uniformly and selectively (abstract, claim 1).

Thus, Yu et al. do not teach or fairly suggest the claimed field grading material comprising: a polymer matrix, said polymer matrix having two or more polymer phases; and a field grading effective amount of a semiconducting nanoparticle filler, wherein said filler is heterogeneously distributed in said polymer matrix such that said

Art Unit: 1762

semiconducting nanoparticle filler is well dispersed in at least part of one of said polymer phases; and wherein said semiconducting nanoparticle filler comprises less than 40% by volume of said field grading material.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to HUI CHIN whose telephone number is (571)270-7350. The examiner can normally be reached on Monday to Friday; 8:00am - 5:00pm EST.
